Chapter One: Introduction

1. Background

Artificial Intelligence (AI) is a computer-based system or machine capable of learning, decision-making, problem-solving, and performing tasks autonomously, much like human beings. AI has been applied in diverse sectors such as education, health, finance, public services, industry, and security. In Nepal, the transformative potential of AI can help reduce the digital divide, enhance efficiency in public service delivery, improve the quality of education, create employment opportunities, foster higher socio-economic development, and contribute to the achievement of sustainable development goals.

In Nepal, significant efforts have been made toward the development, expansion, and regulation of information technology through the enactment and implementation of the Electronic Transactions Act, 2006 (2063 B.S.), the Information and Communication Technology Policy, 2015 (2072 B.S.), the Digital Nepal Framework, 2019 (2076 B.S.), the National Science, Technology and Innovation Policy, 2019 (2076 B.S.), and the National Cyber Security Policy, 2023 (2080 B.S.). The Concept Paper on the Use and Practice of Artificial Intelligence in Nepal, issued by the Ministry of Communication and Information Technology, has also emphasized the need to formulate a National Artificial Intelligence Policy. As a result of these past policy initiatives, access to telecommunications services has expanded widely, the use of the internet has grown significantly, IT infrastructure has been developed, and the sector's competitive capacity has been considerably enhanced.

Globally, technologies such as machine learning, deep learning, predictive AI, and generative AI are being developed and applied across various sectors. In the context of Nepal, universities and private organizations have also been engaged in teaching, research, development, and application of systems such as chatbots,

natural language processing, and machine learning. In this regard, the formulation of a National Artificial Intelligence (AI) Policy is necessary for research, development, and utilization of AI by ensuring proper data management, building digital infrastructure, developing skilled human resources, promoting AI-based industries, and creating an ecosystem for safe and responsible use.

2. Problems, Challenges, and the Need for Policy

2.1 Problems and Challenges

In the context of Nepal, several challenges exist in the field of Artificial Intelligence (AI) like lack of data generation, easy accessibility, and availability; the absence of adequate policy, legal, and institutional frameworks for data security and privacy. Also, there are insufficient infrastructure, standards, and skilled human resources for AI development and use; limited investment and regulatory mechanisms for IT industries, research institutions, and startups related to AI; as well as biased outcomes and privacy violations resulting from AI applications.

Although research, development, and application of AI are advancing rapidly across the world, in Nepal challenges persist in ensuring accountability and responsibility for risks arising from AI use, securing the availability of adequate datasets for AI development and application, and reducing dependency on external resources. Additional challenges include managing the potential reduction of existing jobs due to AI adoption and addressing its impacts; ensuring the required investment, resources, and infrastructure for AI development and application; securing access to advanced technologies; protecting trademarks, patents, and intellectual property rights while preventing violations and misuse; and addressing issues such as misinformation, deepfakes, and personal biases arising from AI; and ensuring the ethical and human-Centered use of AI.

2.2 Need for Policy

The need for this policy arises from the necessity of internalizing the fundamental principles of human-Centered and ethical AI, as guided by the United Nations Educational, Scientific and Cultural Organization (UNESCO) and fostering the development and use of ethical, responsible, and transparent AI systems. Also, this policy is required to coordinate with national and international organizations related to AI; to produce skilled human resources in information technology; to create new employment opportunities through AI-based industries and startup; to prioritize AI-related research and development, and its application across diverse sectors; and the promotion of innovation to generate new opportunities. This policy is also necessary to address risks associated with AI, such as the spread of misinformation and deepfakes, job displacement and its social and economic consequences, and to establish mechanisms for regulation, identification and categorization of risks that can arise from the use of this technology, and its mitigation.

Furthermore, this policy is necessary to promote good governance by integrating AI into existing information technology systems in Nepal, to enhance the quality, accessibility, and efficiency of public service delivery across all three tiers of government in sectors such as agriculture, education, health, industry, finance, public services, and security. It is also required to ensure the creation, availability, and accessibility of data while maintaining privacy and security, to develop policy and structural mechanisms for building a robust data ecosystem, and ultimately to achieve comprehensive socio-economic development through the effective utilization of Artificial Intelligence.

Chapter Two: Policy Framework

3. Vision

To build a human-Centered, ethical, and prosperous Nepal through Artificial Intelligence (AI) technology.

4. Mission

To maximize the use of Artificial Intelligence for the socio-economic development of the nation.

5. Goals

- 5.1 Increase the contribution of the information technology sector to the Gross Domestic Product (GDP) by one percent through the optimal use of AI across all socio-economic sectors.
- 5.2 Improve Nepal's position within the top fifty countries in the Global Government AI Readiness Index.
- 5.3 Produce at least five thousand skilled human resources in the field of AI within five years.
- 5.4 Establish AI Excellence Centres in all provinces within five years.
- 5.5 Achieve AI literacy for the entire population, including students at the basic education level.

6. Objectives

- 6.1 To build a sustainable and reliable AI ecosystem.
- 6.2 To accelerate the economic growth rate through the optimal use of AI.
- 6.3 To enhance the effectiveness of public service delivery through AI applications.
- 6.4 To strengthen AI governance.

7. Policies

- 7.1 Legal and institutional frameworks and infrastructures will be developed for the AI ecosystem. (Objective 6.1)
- 7.2 Human resources will be developed by prioritizing study and research in the sector of AI. (Objective 6.1)
- 7.3 Production and productivity will be increased through the application of AI in overall agriculture, industry, and the service sector. (Objective 6.2)
- 7.4 AI-based industries will be developed through promotion of innovation and entrepreneurship. (Objective 6.2)
- 7.5 Public service delivery will be made automated, efficient, and cost-effective through the use of AI. (Objective 6.3)
- 7.6 AI will be used for the benefit of humanity, while mitigating its potential adverse impacts. (Objective 6.4)

8. Strategies

Related to Policy 7.1 (Legal and institutional frameworks and infrastructures will be developed for the AI ecosystem)

- 8.1 Formulate laws and guidelines for effective management of AI.
- 8.2 Establish specialized structures for the operation, regulation, and promotion of AI.
- 8.3 Develop advanced, high-capacity infrastructures related to AI.

Related to Policy 7.2 (Human resources will be developed by prioritizing study and research in the sector of AI)

- 8.4 Enhance the capacity of stakeholders across all three tiers of government to ensure proper use of AI.
- 8.5 Produce and develop skilled AI professionals through universities and educational institutions.

8.6 Place special emphasis on research and development in the field of AI.

Related to Policy 7.3 (Production and productivity will be increased through the application of AI in overall agriculture, industry, and the service sector)

8.7 Maximize AI use to enhance productivity and quality in sectors such as agriculture, education, health, industry, tourism, energy, and transport, thereby increasing Gross Domestic Product.

Related to Policy 7.4 (AI-based industries will be developed through promotion of innovation and entrepreneurship)

8.8 Promote innovation, entrepreneurship development, and investment for the growth of AI industry.

Related to Policy 7.5 (Public service delivery will be made automated, efficient, and cost-effective through the use of AI)

8.9 Automate public services through AI, reducing cost and time while enhancing citizen satisfaction.

Related to Policy 7.6 (AI will be used for the benefit of humanity, while mitigating its potential adverse impacts)

- 8.10 Develop a risk management and AI governance framework in line with globally recognized standards.
- 8.11 Coordinate and collaborate at national and international levels, with necessary regulations, for the ethical and secure use of AI.

9. Action Policies

Related to Strategy 8.1 (Formulate laws and standards for effective management of AI)

9.1 Enact laws on data security to safeguard ownership, exchange, privacy, and security assurance of personal and institutional data used in AI.

- 9.2 Formulate AI-related laws to assess potential risks arising from AI development and use, and to ensure its responsible and accountable usage.
- 9.3 Review and amend existing sectoral laws and directives to make them AI-compatible.
- 9.4 Develop standards for data, algorithms, and technologies, ensuring alignment with ethical values in the development and use of AI.
- 9.5 Undertake benchmarking, standardization, and certification of AI systems developed and used in Nepal to ensure quality, safety, and reliability, and develop a National AI Index.
- 9.6 Develop standards to manage challenges such as intellectual property misuse, cybersecurity risks, and the spread of misinformation or disinformation through AI.

Related to Strategy 8.2 (Establish specialized structures for the operation, regulation, and promotion of AI)

- 9.7 Establish an AI Regulatory Council to provide guidance on AI research, development, and application in line with international principles and practices.
- 9.8 Establish a National AI Centre to ensure effective implementation of AI-related policies and laws.
- 9.9 Set up AI Excellence Centres in universities, research institutions, and educational institutions for AI studies, research, and development.
- 9.10 Create a Regulatory Sandbox for the safe development and testing of AI systems.
- 9.11 Enhance the capacity of existing institutions to address challenges such as privacy, ethics, human rights, and cybersecurity risks arising from use of AI.

Related to Strategy 8.3 (Develop advanced, high-capacity infrastructures related to AI)

- 9.12 Improve existing information and communication technology (ICT) infrastructure to make it AI-friendly.
- 9.13 Make provision for infrastructures required for AI development and application, including Data Centre, Cloud Infrastructure, high-performance computing, reliable electricity supply and high-speed internet.
- 9.14 Conduct feasibility study on establishing industries to produce AI hardware domestically within Nepal.
- 9.15 Adopt the concept of public-private partnership with procedural simplification and incentives for investments in digital infrastructure required for AI development and use.
- 9.16 Establish and operate Data Centre in Nepal's High Mountainous and Himalayan regions utilizing green infrastructure.

Related to Strategy 8.4 (Enhance stakeholder capacity across all three tiers of government for effective AI use)

- 9.17 Conduct AI literacy, awareness, and orientation programs through federal and provincial government, and local levels.
- 9.18 Conduct skill-based training, capacity-building, and awareness programs to ensure equal access and participation of children, senior citizens, minorities, persons with disabilities, and other marginalized communities in AI development and use.
- 9.19 Conduct skill-based training programs for policymakers, employees, and professionals in the public and private sectors through the National AI Centre, AI Excellence Centres, training Centres, and relevant organizations working in this field.

Related to Strategy 8.5 (Produce and develop skilled AI professionals through universities and educational institutions)

- 9.20 Integrate AI-related subjects into the curricula of schools, universities, and other educational institutions.
- 9.21 Run AI-related academic programs in higher education to develop skilled human resources.
- 9.22 Conduct certification programs to develop professional human resources required for AI.
- 9.23 Conduct reskilling programs at federal, provincial, and local levels to mitigate the impacts of potential job reductions caused by AI.
- 9.24 Conduct upskilling programs to enhance AI-related skills of human resources working in the information technology sector.

Related to Strategy 8.6 (Place special emphasis on research and development in the field of AI)

- 9.25 Operate programs on AI studies, research, training, and capacity-building through federal and provincial AI Excellence Centre.
- 9.26 Establish AI Incubation Hub to encourage and facilitate startups and innovative enterprises.
- 9.27 Manage scholarship and internship to university students to enhance practical knowledge of AI.
- 9.28 Implement Brain Gain Program to Nepali citizens residing abroad to utilize their AI-related knowledge in Nepal.

Related to Strategy 8.7 (Maximize AI use to enhance productivity and quality in sectors such as agriculture, education, health, industry, tourism, energy, and transport, thereby increasing Gross Domestic Product)

9.29 Implement programs such as agricultural production forecasting, market prediction, soil condition monitoring, pest and disease prediction, data-

- driven farming system, crop and disease monitoring, smart irrigation and pesticide use, livestock health monitoring, and e-markets to modernize and commercialize agriculture.
- 9.30 Reduce learning inequality through the application of natural language processing (NLP), personalized learning, and adaptive learning.
- 9.31 Enhance the accessibility and quality of healthcare services through AI applications in areas like diagnostic imaging, early disease detection, and genomic analysis.
- 9.32 Increase the use of AI-based technologies such as smart grid, smart switching, and smart meter in energy production, transmission, and distribution.
- 9.33 Improve road safety and reduce cost and time through application of AI in areas like traffic management, parking management, traffic surveillance, public transport, and logistics.
- 9.34 Promote Nepal's tourism through AI-based destination selection, virtual tour guide, 3D modeling and enhanced tourist safety.
- 9.35 Enhance the efficiency, productivity and effectiveness of the financial sector through the use of AI in areas like promotion of institutional governance of banks and financial institutions, control of financial crimes and prevention of money laundering.
- 9.36 Improve production, productivity, and quality in the industrial sector through application of modern technologies like AI automation, automated system and Industry 4.0.
- 9.37 Maximize usage of AI in environmental and natural resource conservation, hydrological and meteorological forecasting, management of disasters like earthquakes, floods, landslides, wildfires etc. and control of pollution.

Related to Strategy 8.8 (Promote innovation, entrepreneurship development, and investment for the growth of AI industry)

- 9.38 Prepare a list of priority AI projects beneficial to both government and the private sector.
- 9.39 Attract domestic and foreign investment into priority AI projects through government, private sector, and public-private partnership models.
- 9.40 Provide monetary and non-monetary benefits and incentives to startups to foster innovation and entrepreneurship.
- 9.41 Prioritize domestic industries and businesses to ensure data ownership and self-reliance.
- 9.42 Arrange seed capital in collaboration with private and public institutions to promote AI entrepreneurship
- 9.43 Utilize financial instruments such as venture capital and crowdfunding to promote AI-related startups.
- 9.44 Arrange joint investment from government and private sectors to implement large- scale AI projects.
- 9.45 Facilitate the international market expansion of Nepali AI products through diplomatic channels.
- 9.46 Leverage the AI related knowledge, skills, and capital of the Nepali diaspora and Non-Resident Nepalis (NRNs).

Related to Strategy 8.9 (Automate public services through AI, reducing costs and time while enhancing citizen satisfaction)

- 9.47 Maximize AI use at federal, provincial, and local levels to make public service delivery efficient, cost-effective, and automated, thereby improving service quality and citizen satisfaction.
- 9.48 Maximize AI use to make public policy, planning, budgeting, implementation, monitoring, and evaluation evidence-based.

- 9.49 Use AI to enhance easier access to public service delivery for women, children, senior citizens, marginalized communities, minorities, and persons with disabilities.
- 9.50 Expand AI use in citizen security, crime investigation and surveillance, and emergency response.
- 9.51 Maximize AI use for the effective implementation of the Digital Nepal Framework.
- 9.52 Apply AI to enhance the effectiveness of services delivered through the Nagarik App.

Related to Strategy 8.10 (Develop a risk management and AI governance framework in line with globally recognized standards)

- 9.53 Prepare and implement an AI governance framework to classify AI systems based on risk and mitigate risks accordingly.
- 9.54 Ensure classification of data used in AI, sectoral data collection, dataset creation and make provision of secure and easy access to data storage.
- 9.55 Promote open data exchange and interoperability.
- 9.56 Establish an AI-focused open data portal to provide quality datasets in sectors such as agriculture, education, health, industry, and tourism, thereby promoting development and innovation.
- 9.57 Maintain access and control of relevant authorities over sensitive data required for AI research and development.
- 9.58 Ensure necessary measures for data security and privacy in AI systems.
- 9.59 Coordinate and collaborate with AI stakeholders to protect trademarks, patents, and intellectual property during AI usage/application.
- 9.60 Adopt preventive and control measures to mitigate negative impacts caused by misinformation, deepfakes, and personal biases through AI.

9.61 Emphasize the use of local languages in AI system development.

Related to Strategy 8.11 (Coordinate and collaborate at national and international levels, with necessary regulations, for the ethical and secure use of AI)

- 9.62 Conduct various programs and projects in collaboration with national and international organizations related to AI.
- 9.63 Operate AI-related studies, research, and development activities in partnership with universities, educational institutions, and national and international organizations.
- 9.64 Collaborate with and engage in participation and affiliation with national, regional, and international organizations working in AI to mitigate risks arising from AI usage.
- 9.65 Work on data availability from international service providers.
- 9.66 Collaborate for sharing and exchange of AI technology development, expansion, and usage at national and international levels.

Chapter Three: Policy Implementation

10. Institutional Arrangements

For the implementation of the National AI Policy, the following institutional arrangements shall be made:

10.1 AI Regulation Council

To provide overall guidance, develop standards, and regulate the development and use of AI, an AI Regulation Council shall be formed as follows:

- (a) Minister, Ministry of Communication and Chairperson Information Technology
- (b) Secretary, Office of the Prime Minister and Council Member of Ministers
- (c) Secretary, Ministry of Communication and Member Information Technology
- (d) Secretary, Ministry of Finance Member
- (e) Secretary (technical), Ministry of Education, Science Member and Technology
- (f) Chairperson, Nepal Telecommunications Authority Member
- (g) Chief Executive Officer, E-Governance Board Member
- (h) Three subject-matter experts from the private sector Member and universities (including at least one woman)
- (i) Chief, National AI Centre —Member
 Secretary

The AI Regulation Council shall meet at least twice a year. The AI Regulation Council may invite officials or employees in its meeting as required. The tenure of members under Section 10.1 (h) shall be three years from the date of appointment. The National AI Centre shall serve as the Secretariat of the AI Regulation Council.

10.1.1 Functions, Duties and Powers of the AI Regulation Council

- (a) Provide guidance focusing on fairness, transparency, accountability, protection of intellectual property, and protection of human rights in AI development and use, and approve related standards.
- (b) Recommend to the Government of Nepal to align relevant national laws and standards with international treaties and norms.
- (c) Facilitate necessary coordination and collaboration among federal, provincial and local levels, and other relevant agencies on AI development and use.
- (d) Test and ensure compliance with approved AI policies, laws, and standards.
- (e) Provide necessary guidance for effective policy implementation.
- (f) Perform other necessary tasks.

10.2 National AI Centre

A National AI Centre shall be established under the Ministry of Communication and Information Technology to promote, encourage, facilitate, and regulate the study, research, development, and application of AI.

10.2.1 Functions, Duties and Powers of the National AI Centre

- (a) Promote, encourage, and regulate the study, research, development, and application of AI.
- (b) Act as the focal point for coordination and cooperation on AI-related matters at the international level.

- (c) Coordinate, facilitate, monitor, and evaluate AI-related programs and activities conducted by federal, provincial, and local levels for the development and use of AI.
- (d) Coordinate and collaborate with universities, public and private sectors, and national and international institutions on the AI-related matters as required.
- (e) Conduct awareness, training, and capacity-building program on AI.
- (f) Set quality and standards for AI-related products and services.
- (g) Develop the National AI Index system and publish it periodically.
- (h) Develop and operationalize a National AI Portal to disseminate AI-related information through a one-door system.
- (i) Publish periodic reports on the status of development and application of AI.
- (j) Identify potential AI-related risks, develop frameworks for risk mitigation and implement them.
- (k) Mobilize skilled human resources related to AI and undertake other necessary tasks for the development of this sector.
- (l) Function as the Secretariat of the AI Regulation Council.

10.3 AI Excellence Centre

AI Excellence Centres shall be established at federal, provincial, and local levels, as well as in universities, AI related research institutions, and educational institutions to promote AI study, research, development, and application.

10.3.1 Functions, Duties and Powers of AI Excellence Centre

- (a) Conduct research and development in AI technology sector.
- (b) Organize training and workshops to develop AI skills for students and researchers.

- (c) Manage data used in AI research and development, prioritizing data privacy, ethics, and transparency.
- (d) Provide necessary suggestions and recommendations to the National AI Centre for policy formulation.
- (e) Provide suggestions to the National AI Centre to ensure quality and security in AI technology.
- (f) Support the capacity development of local researchers and institutions.
- (g) Do necessary facilitation and coordination in the use of AI technologies in agriculture, education, health, finance, tourism, transportation, energy, public service, and security.
- (h) Collaborate with national and international research institutions under the coordination of the National AI Centre.

11. Legal Provisions

The Government of Nepal shall make necessary legal arrangements for the implementation of this policy. This policy shall serve as a basic guideline while formulating sectoral directives, procedures, and guidelines related to AI. This policy shall act as a guiding policy for provinces and local levels. The respective provinces and local levels may customize and adapt the policy based on their geographical, economic, social, cultural, and technical context.

12. Financial Provisions

For the implementation of this policy, necessary plans, programs, budgets, and human resources shall be ensured through the relevant ministries and agencies of the Government of Nepal. The federal, provincial, and local levels shall prioritize and implement AI development objectives and policies specified in this policy through their annual budgets and programs.

Additionally, resources shall be mobilized and utilized through coordination and partnership with national and international non-governmental organizations, the private sector, universities, and development partners for implementing AI development programs reflected in this policy.

13. Policy Coordination and Harmonization

The Ministry of Communication and Information Technology shall play the leading role in implementing this policy. The responsibility of effectively implementing sectoral strategies and action policies shall rest with the respective ministries, commissions, agencies, provinces, and local levels.

Given the significant role of all three levels of government, the private sector, community organizations, development partners, and both domestic and foreign universities, coordination, cooperation, and partnerships shall be ensured among all stakeholders. Cross-agency coordination shall be maintained to ensure coherence among sectoral policies, plans, annual budgets, and programs.

14. Risk Identification and Management

The implementation of this policy may be affected by inconsistencies among plans, budgets, and programs; lack of sufficient resources, capacity, change management skills, policy, structural and operational coordination. Also, there is a risk of weak meaningful participation of governments at all levels and other stakeholders. Ineffective implementation of AI-related programs by ministries and agencies may hinder the achievement of policy objectives. Limited financial resources and data availability may obstruct AI development, while challenges may also arise in developing AI infrastructure and producing and managing skilled human resources.

To manage the aforementioned risks, the National AI Centre, under the guidance of the AI Regulation Council, shall assess existing and potential risks, prepare action plans, and implement them accordingly.

15. Monitoring, Evaluation and Policy Review

15.1 Monitoring and Evaluation

The primary responsibility for monitoring and evaluating whether the goals and objectives set by the National AI Policy have been achieved shall rest with the Ministry of Communication and Information Technology. Additionally, relevant federal agencies, provincial ministries, and local levels shall also monitor and evaluate the policy implementation. The Office of the Prime Minister and Council of Ministers, the National Planning Commission, the AI Regulation Council, the National AI Centre, and the Nepal Telecommunications Authority may also monitor and evaluate the status of policy implementation.

15.2 Policy Review

The Ministry of Communication and Information Technology shall review the implementation of this policy annually. Concrete standards for monitoring and evaluation of different aspects of policy implementation shall be developed and policy effectiveness shall be assessed, and the policy shall be reviewed every two years.

16. Policy Implementation Action Plan

For the implementation of this policy, out of the action policies included in this policy, action policies that can be executed through regular budget shall be incorporated into the annual programs and budget of all relevant agencies at the three levels of government according to their respective work divisions and jurisdictions. Public sector-related tasks mentioned in the policy shall be executed

by the public sector, private sector-related tasks by the private sector, and tasks requiring public-private partnership shall be jointly implemented. The Ministry of Communication and Information Technology shall, as per the action plan in Schedule-1, implement its own tasks and coordinate those to be undertaken by other agencies for effective implementation of this policy. To achieve the policy's goals and objectives, policy implementation shall be aligned with Nepal's Constitution, Periodic Plans, Sustainable Development Goals, and relevant sectoral policies, strategies, and action plans.

In case of any ambiguities, obstacles, or hindrances in policy implementation, the Ministry of Communication and Information Technology shall interpret and resolve them.

Schedule-1
Policy Implementation Action Plan

| S.N. | Policies and Activities | Responsible Agency | Supporting Agency | Timeline | Expected Outcome | Monitoring Indicators |
|------|---|---|---|----------|------------------------|---|
| 1 | Enact laws on data security to safeguard ownership, exchange, privacy and security assurance of personal and institutional data used in AI, and review and amend laws to make them AI-compatible. | Communication s and Information Technology, | Office of the Prime Minister and Council of Ministers, Ministry of Finance, Ministry of Law, Justice and Parliamentary Affairs, sectoral ministries | 2 years | Necessary laws enacted | Number of data protection laws; AI development, use and regulation laws; number of amended laws |
